Genesis from the Alpha to the Omega of Consciousness

We read in the Gospel of John: *In the beginning was the Word, and the Word was with God, and the Word was God. The same was in the beginning with God. All things were made by him; and without him was not any thing made that was made. And the Word was made flesh, and dwelt among us.*¹

In light of the latest understanding of Quantum Mechanics we could easily redactor this piece of scripture to read as follows: In the beginning was the (Wave), and the (Wave) was with (Consciousness), and the (Wave) was (Consciousness). The same (Wave) was in the beginning with (Consciousness). All things were (Collapsed) by (Consciousness); and without (Consciousness) was not any thing (Collapsed) that was (Collapsed). And the (Wave) was (Collapsed) as (Particle), and dwelt (Entangled) among us.

This makes complete sense when you ponder the fact that an electron is in superposition and non-local till it is observed or measured. Where is the electron until it is collapsed by either super consciousness or human consciousness? There are many views on that. The electron to some scientist is just a wave potential without out form or position until it is measured or observed, at which time the electron emits a photon of light and is localized for a split second in space and time.

Quantum Decoherence Theory²

Some other scientists believe that consciousness is not necessary for the collapse of a wave into a particle. They believe that at a certain point in space-time geometry, the electron or group of potentials becomes entangled with the environment.

This causes the electron to become decoherent, and sort of collapses under a type of self-regulating law similar to a type of quantum gravity. This would also apply to macroscopic objects like the universe. Thus, for them, there need not be any God or any consciousness present for this self-regulating principle to take place. The universe is objective and exists without an observer. Consciousness is an emergent property like heat coming from the sun. The universe is reduced to a self-regulating machine. But, this view is incomplete.

Quantum Consciousness or Objective Reduction³

Canned-levered off of this quantum decoherence theory is a theory of consciousness by Stuart Hameroff and Roger Penrose. They see the brain as a quantum system of consciousness that collapses perceptions from the physical senses at the rate of about forty times a second. This process takes place in microtubules (tubulins) in the neurons in the brain. The tubulins are able to operate on a molecular level and are able to separate from the classical part of the brain between collapses which allows them to remain coherent and avoid decoherence until the interpretation processing is completed. Thus, forty times a second, the tubulins are interacting between quantum and classical reality. Interesting theory, but does not really explain consciousness. However, it does at least propose macroscopic super-positional states of existence.

David Chalmers, Philosopher of Consciousness⁴

Noted philosopher David Chalmers has stated that the problem of how consciousness could arise out of non-consciousness has not been solved. He calls this the hard problem. De-coherence theories of wave collapse, which state that consciousness does

not have to be there to collapse the wave function suffers from this and many other logical fallacies. Also, the brain mind studies only show correlations between consciousness and brain functions and not what consciousness in itself truly is.

If these scientist truly understood Plato, Pythagoras, Pantanjali, Muktananda, and a whole host of other seers, they would know that the laws of physics exists at an archetypal plane of potential. They were chosen by transcendent universal non-local consciousness long before the big bang came into our space-time reality. Quantum decoherence exist because universal consciousness chose it long ago for our universe. It is not the lower ego that is the observer, but the true self, the God self. When the higher self identifies with the lower, it becomes hierarchally entangled.

Neo-Copenhagen to Paleo-Copenhagen⁵

The Copenhagen interpretation of Quantum Physics was first proposed by Niels Bhor and Werner Heisenberg in Copenhagen, around 1927. For them, the observer collapsed the wave function, and not the interference from the environment leading to decoherence.

Because of peer-pressure, ignorance, and in many cases prejudice, the Copenhagen interpretation of Quantum Physics is belittled by many contemporary scientists. Much of this is due to the unnecessary separation of science from spirituality. But a growing number of what I call neo-Copenhagen interpretive scientist are reinterpreting the meaning of consciousness. Dr. Amit Goswami is such an advocate proposing that consciousness is the foundation of all reality. Goswami is careful to propose that universal, transcendent, non-local consciousness is the foundation all reality and not the lower ego.

I choose to call my view the Paleo-Copenhagen view suggesting that it goes back to the ancient writings of the Hindu Vedas and Upanishads. These great seers and ancient Masters knew and taught that consciousness was and is the foundation of all reality. They have done what today's physicists have failed to do: to go within the observer himself

to find the truth. These ancient inner technologies are the way to the truth. All the scientist can do today with their physical instruments of the macroscopic world is to reach the very threshold of the spiritual world without being able to enter it. However, other scientists are allowing the spiritual to enter the realm of the laboratory.

Finally, anyone who begins to meditate and learns to be a good observer will see manifestations taking place in their life due to the intentions of their mindful meditations. The *mechanism* by which *macroscopic* collapses of potential enter into our lives as opportunity, healings, and success is different then the ones studied by quantum physicists. They are more complex and subject to the brilliance of the one transcendent non-local consciousness, whose center is everywhere, and whose circumference is nowhere. *In the beginning was the Word, and the Word was with God, and the Word was God.*
